

“A tailored solution for asset collection and management using our award winning platform”

ASSET OWNER

- The ability to easily export and share data between existing corporate systems enables increased performance monitoring.
- Access and download Ordnance Survey mapping anywhere across Britain in seconds.
- Agreed KPIs can be tracked meaning work undertaken is more focused and delivers results.
- Historical information is recorded against each asset.

CONSULTANT OR FACILITY MANAGER

- Real time recording of completed work makes progress monitoring simple.
- Questions and queries are easily answered with flexible reporting.
- No more problems sharing data, making it easier to focus on analysis and outcomes.
- One off surveys or regular monitoring can be managed.

SURVEYOR

- Wirelessly communicate assets or survey areas to the device.
- Tailored reporting helps automated invoicing to save time.
- Downtime is minimised by offering wireless communication and operation on existing user tablets or phones.
- Easily monitor productivity and crew locations from the office interface.
- Record existing paperwork digitally within the system.

USER

- Use of downloadable full colour ordnance survey mapping enables accurate data collection.
- Deployment on commonly used smart phones and tablets simplifies training.
- Automatic referencing to other geographical boundaries, road names and data sets.
- The system can be used offline and changes uploaded once reconnected to the internet for total flexibility.

USE ANY ANDROID OR IOS BASED DEVICE

AREA & WORK ALLOCATION MADE EASY

ASSET OWNER

Assets and survey areas are identified that require surveying.

STAGE 1

FIND WHAT YOU
ARE LOOKING
FOR QUICKLY
AND EASILY

Find Road

Search: bev

- BEVAN CLOSE (Rushall-Shelfield)
- BEVIN ROAD (Bentley And Darlaston North)

Show

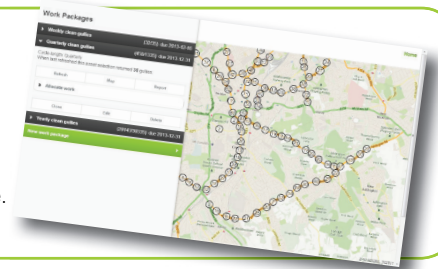

Search whole of UK using road name, asset ID (if previously surveyed) or postcode.

SURVEY MANAGER

The survey manager reviews area to be surveyed. These are easily defined by rectangle or polygon on the map. Work package is then produced that includes previously surveyed assets and OS maps down to MasterMap level. The work package is wirelessly sent to the surveyor. Review how teams are progressing online. Individual counters and reporting for each area, crew or work package.

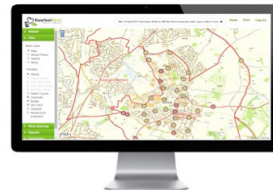

STAGE 2

SURVEYOR IN THE FIELD

Surveyor receives work package with required maps and visits the assets required or collects new data. At the end of the shift, all survey data is uploaded and is visible by all users enabling visibility over progress.

STAGE 3

“Survey tools for the mobile world”
